

## BULK Loading example

To create a database, follow these steps:

1. Open *SQL Server Management Studio*,
2. In the connection window, select *Server Type: Database Engine*, *Server Name: localhost* (your own configuration is needed),
3. Select *Connect*,
4. Open the file with the database structure (*File → Open → File*),
5. Execute the command,
6. In the left-hand panel in the *Database directory* the database should be seen (if you don't see it refresh the list).

Exemplary script creating a database can be found in the file *TworzenieBazy.sql*.

To load the database, follow these steps:

1. Open a file containing the script loading data (*File → Open → File*)
2. Execute the command
3. In the left panel or by executing the appropriate *SELECT* command, check whether the data has been loaded correctly.

Examlary script lading data using *INSERT* and *BULK* commands can be found in the file *LadowanieDanych.sql*. The correct execution of the script requires a file *data.bulk* and the correct path to this file in *LadowanieDanych.sql*.
